BAXTER CELEBRATES WORLD KIDNEY DAY

*Knowing your risk factors and making lifestyle changes
can help prevent chronic kidney disease*

DEERFIELD, Ill. March 9, 2017 – Baxter International Inc. (NYSE: BAX), a global innovator in renal care for more than 60 years, is a proud supporter of World Kidney Day, an education campaign focused on reducing the frequency and impact of kidney disease. As part of its support, Baxter is encouraging individuals around the world to understand their risk factors and make lifestyle changes that can prevent kidney disease, or dramatically slow its progression. An estimated one in 10 people around the world have chronic kidney disease (CKD), which translates to approximately 26 million Americans.

“Most people don’t realize that your kidneys play a vital role in your health, from filtering toxins from your blood to regulating blood pressure,” said Maggie Gellens, M.D., medical director for Baxter. “Diabetes and hypertension take their toll on your kidneys and are the most common causes of CKD.”

Kidney disease is often called a ‘silent disease’ because it does not always present symptoms. Kidney disease is a lifetime condition and does not go away, but some types of kidney disease can be treated—especially when caught early—which is

why it is so important to recognize risk factors and early symptoms. [Watch this video to learn more about kidney disease.](#)

“If I only knew then what I know now regarding the impact of my choices on my kidneys, I would have made different decisions in the past,” said Karmen Laws, a wife and grandmother with end-stage renal disease, which is the most severe form of CKD. She uses Baxter’s peritoneal dialysis therapy at home every night to remove toxins from her blood now that her kidneys no longer work properly. “Don’t wait until you have kidney disease to make a change. Integrate healthy lifestyle choices into your daily activities, including proper nutrition and exercise.”

Baxter has a long legacy of supporting the kidney disease community, and has been a sponsor of World Kidney Day for many years. Baxter and the NAACP have also launched a new partnership to improve knowledge about kidney disease and dialysis treatment options for African Americans.
